

Shaker Ring

PESH110

The family of the percussion instruments is immense, as almost every material produces a sound. Here we present a plain but interesting sound object made from brass that originates from Vietnam. The Shaker Ring is hollow and has an open inside groove. Inside the ring there are small metal balls that can be shaken. The speciality of this instrument is that it is put onto the thumb and the other fingers enclose it while shaking. By alternate opening and closing one creates interesting sound effects.
