

# Spring Drum

- PESP110 small oblique
- PESP120 medium oblique
- PESP130 large oblique
- PESP210 small straight
- PESP220 pot middle straight

PESP001 simple

Finally an instrument that can imitate thunder and lightning. The spring hangs down freely—if you shake it you hear the thunder roaring. The resonance box is its amplifier. While shaking the spring if you gently strike it against an object you even hear the lightning. Zeus would be jealous!

The models with straight boxes can also produce rain drops; just beat on the skin with your fingers. The other models may only be shaken.
