

Howling Tube

It's not only fun for kids! The Howling Tube also offers sophisticated effects while improvising or in group work.

These plastic tubes with Accordion-like structure are very easy to play:

Hold one end of the tube tightly with one hand and start spinning it around. By changing the speed of spinning you can create lower and higher notes according to the natural scale. You may also use 2 Howling Tubes at once, so as to play in two different scales. The best way to do that is to cut off a few inches of one tube.
